### Procedure:

Heat phase B to 75-80°C and disperse the pigments while stirring. Homogenize until the pigments are well dispersed. Add phase A and phase C successively while stirring and at least add phase D, homogenize again if necessary. Filling temperature 90°C.

### Notes:

Formula development and manufacturing made by Weckerle Cosmetics.

The skin-toned shade of this very soft and irresistible Mousse Foundation is created by a combination of Ronastar® Red Allure and Colorona® Imperial Citrine supported by a treated titanium dioxide and a treated yellow iron oxide. With its mattifying and light diffusing properties RonaFlair® Flawless is the ideal functional filler to support the special features of this formulation. The mousse can be applied and spread easily with fingertips for a smooth finishing.
